The SAS System
TVEM Macro Output Summary

```
================================================================
Time-Varying Effects Modeling (TVEM) Macro Output
================================================================
Dataset:                  SASUSER.OSM23
Time variable:            timetodeath_rev
Response variable:        intrinsic3
Response distribution:    Normal (Gaussian)
Random effects:           Intercept
Time-varying effects:     intercept
Knots for splines:        5
Degree for splines:       3
Number of observations used:         81047
Internal computations in PROC GLIMMIX converged successfully.
================================================================
Log-likelihood (less negative=better fit):               -284244.542
AIC (smaller=better fit):                                 568511.083
BIC (smaller=better fit):                                 568613.413
================================================================
The estimated coefficient functions are stored in the dataset tvem_plot_data.
================================================================
```

Covariance Parameters

Obs	CovParm	Subject	Estimate	StdErr
1	Intercept	STUDYID	170.26	8.9484
