TVEM Macro Output Summary

```
================================================================
Time-Varying Effects Modeling (TVEM) Macro Output
================================================================
Dataset:                  SASUSER.OSM23
Time variable:            timetodeath_rev
Response variable:        instrumental_bi
Response distribution:    Binary (Logistic)
Random effects:           Intercept
Time-varying effects:     intercept
Knots for splines:        5
Degree for splines:       3
Number of observations used:         83182
Internal computations in PROC GLIMMIX did not converge successfully.
Message:Did not converge.
================================================================
================================================================
```

Covariance Parameters

Obs	CovParm	Subject	Estimate	StdErr
1	Intercept	STUDYID	4.9975	.

Error in macro: Estimation was not successful.
